Home	SP 897007 HP16 0BN	Misbourne School	60	0	WELL DONE. You have done almost 1.5 marathons in less than 18 hrs with kit over rough terrain.

Course notes, tips & ideas

- Use Google Earth & Street View and “Grid Reference Finder” when plotting the course, but remember the use of GPS navigation is not permitted except in an emergency
- There is still some road walking but where possible it has been reduced. However, there are a number of paths that break out onto roads and in some cases with poor visibility left & right, Note these locations.
- Beware Rabbits!! There are a number of locations on the route that have a healthy rabbit population and they don't mind where they dig burrows or in particular bolt holes which are often away from the main warren and all too frequently close to bridleways and footpaths. These bolt holes are often 'camouflaged' (cunning devils these rabbits!) and hard to see in daylight let alone the dark...stay alert to their possible presence, typically close to hedges and fences
- Many of the bridleways see heavy use from horses and 'mountain bikes' and it is common to come across them in daylight hours, the bikes are a particular hazard especially if coming from behind as you may not hear them. Depending on weather conditions these two users can leave sections badly rutted; creating very boggy areas or hard, sharp, cratered sections adapt and twisting the ankle of the unwary. Been there, done that, not good!
- Increase your visibility to road users or people searching for you. In addition to torches and the Hi-Vis jackets try a small 'cycle' lights attached to your rucksack, or try sticking some reflective tape to prominent areas of your rucksack to increase the probability of being seen at night. small but numerous strips on key bits like the end of straps, shoulder strap etc.. It's very effective and needs no batteries. One possible reflective tape supplier.
